I am a skilled and enthusiastic security engineer, with years of experience focused on Identity and Access Management. I have spent the last 6 years bringing value to IBM's customers as a consultant across europe and I have added clear value to my customer's solutions. I deeply enjoy the work I do and my passion for clean and secure solutions is reflected in the high standard of work I produce. I have lots of experience with networking and web systems, both on-prem and cloud-based, as well as plenty of experience using Javascript and Python.

Employment History

2019 – Present

Identity & Access Specialist @ IBM Security Europe

My current role at IBM has me working with clients across Europe, Middle East and Africa. I specialise in Identity and Access Management, normally focused on Access Management for web based systems. My responsibilities include leading teams through design, implementation and testing of large-scale identity and access management solutions. My current client is a department of the dutch government, and I have led their implementation of the eIDAS identity standard.

2014 – 2019

Identity & Access Specialist @ IBM Security

I joined IBM as an apprentice in 2014 having studied computer science at A-level. I thrived in the apprenticeship scheme and in 2016 won the British Computer Society's 'Apprentice of the Year' award. As an identity and access management specialist I worked with IBM security customers across the UK to build secure, scalable security solutions.

Relevant Qualifications

OCR Level 3 Cambridge Technical Certificate in IT - Distinction
Computer Science A-Level   - B
OCR Extended Project in Computer Usability   - A

Hobbies

I love to build things. In my free time I'm always working on a number of side projects, normally something written in Javascript. Please see willmurphy.co.uk/projects for some of the things I've been working on.
